Restful-Booker API Testing

By:
Rozan AbuKwiak
Hiba AbuKwiak
Ahmad Basheer
Mohammad Alswaisy

Version: 1.0 Date: April 15, 2026 Type: RESTful Web Service

Introduction

This test plan defines the strategy and approach for testing the Restful-Booker API.

The goal is to ensure API quality, reliability, and correctness.

It outlines

- Scope of testing
- Objectives
- Tools and environment
- Roles and responsibilities

API Overview

Restful-Booker is a public REST API used for testing purposes.

Main Features:

- Authentication (Token-based)
- Booking management (CRUD operations)
- Retrieve booking IDs

It simulates a real-world booking system for QA practice.

Scope of Testing

In Scope:

- All API endpoints (Auth & Booking)
- CRUD operations
- Positive & Negative scenarios
- Request & response validation
- Status code validation
- Authentication testing

Out of Scope:

Performance testing → Advanced security testing → UI testing

Test Objectives

01 Verify all endpoints follow API documentation

02 Validate request payloads (fields, data types)

03 Ensure correct HTTP status codes

04 Test authentication mechanisms

05 Detect bugs and logical issues

06 Provide clear defect reports

Test Approach

Types of Testing:

- Functional Testing (Positive & Negative)
- Input Validation Testing
- Authentication & Authorization Testing

Tools Used:

Postman	API testing & automation
Jira	Bug tracking
Trello	Task management

Test Environment

Environment:

Base URL:

https://restful-booker.herokuapp.com

Configuration:

Auth
Token-based

Headers

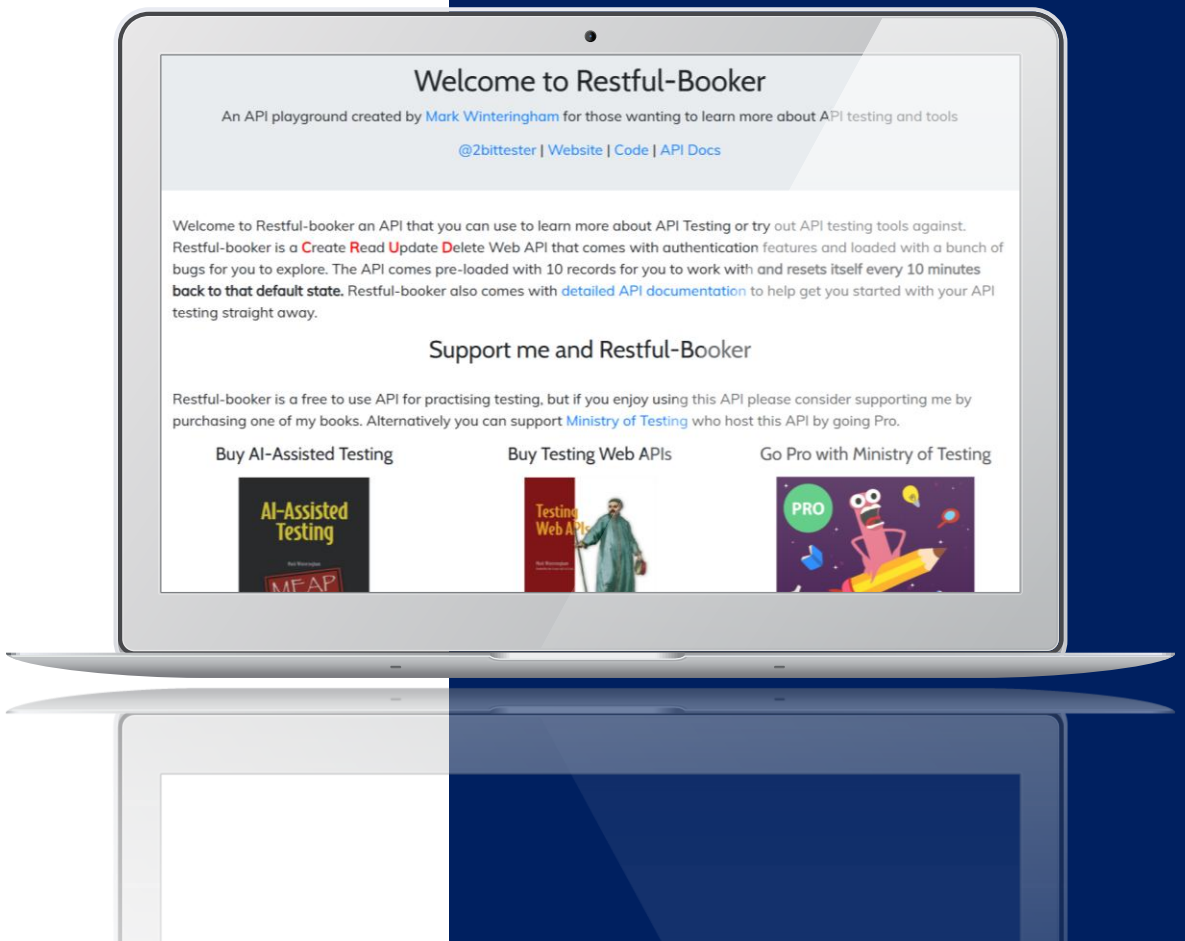
Content-Type
application/json

Accept
application/json

Test Data:

Username
admin

Password
password123



Roles & Responsibilities

01

QA Engineer

Ahmad, Rozan, Hiba, Mohammad

Create test cases, execute tests, report bugs

02

Test Lead

Mamoun, Afnan

Review test plan and ensure quality

03

Developer

Fix bugs and maintain API stability

Entry & Exit Criteria

Entry Criteria:

- API documentation available
- Environment stable
- Postman ready

Exit Criteria:

- 100% test cases executed
- Critical bugs fixed
- Test report completed

Roles & Responsibilities

Risks :

- API downtime
- Data reset
- Limited authentication

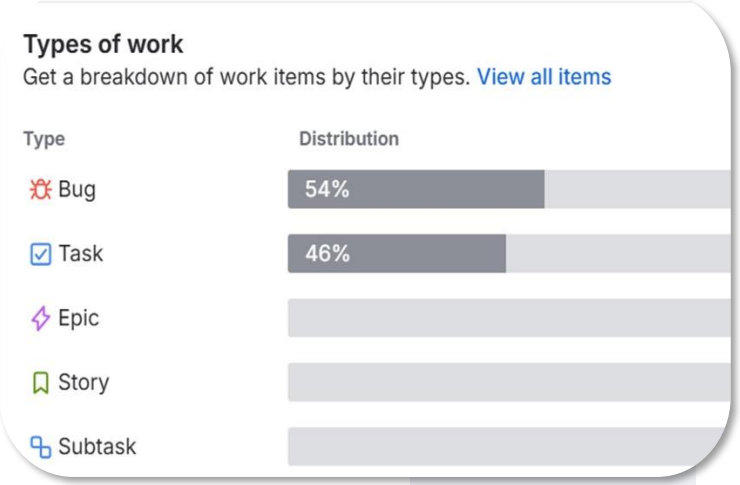
Mitigation :

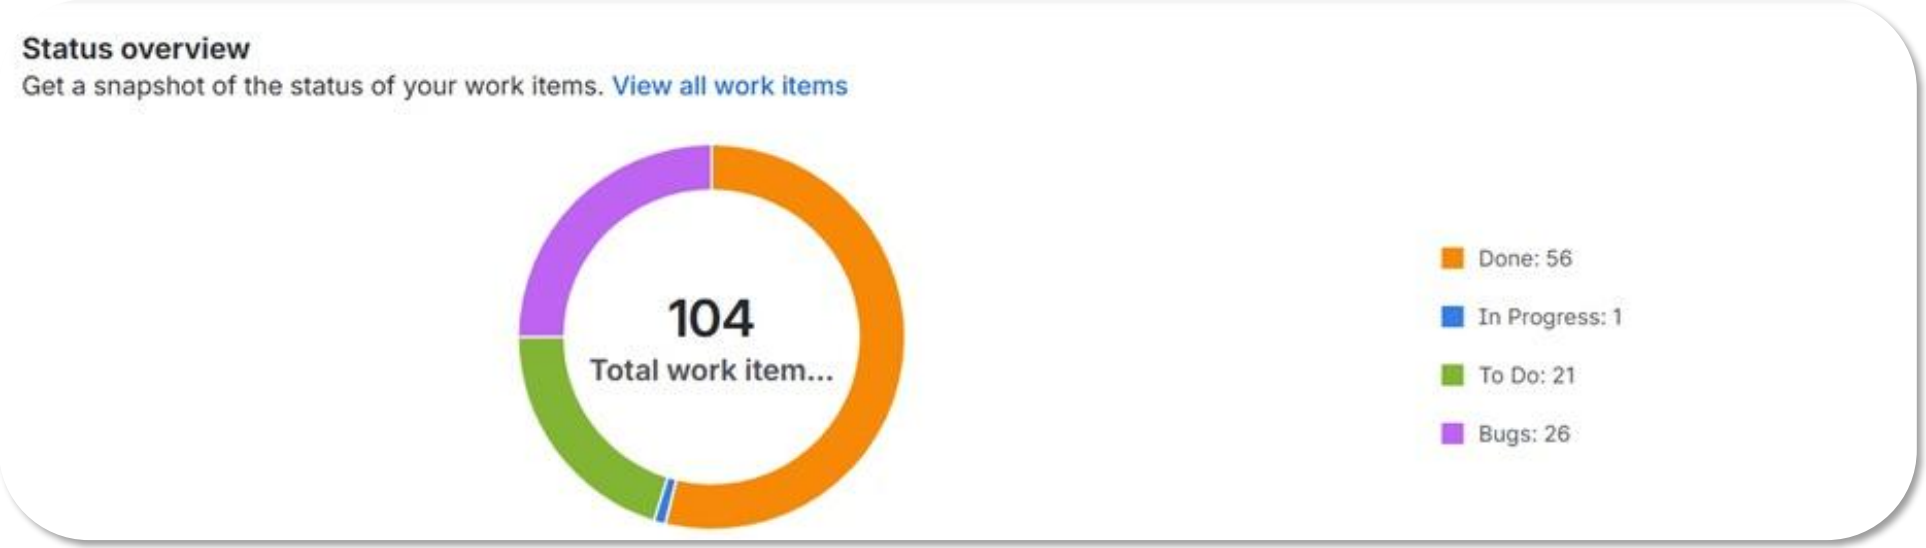
- Use mock server
- Always create fresh data

Sample Test Cases :

Token generation	→	200 OK	Get booking invalid ID	→	404
Create booking	→	Success	Delete without token	→	403

Test Summary shows how many test cases were executed, passed, failed, or blocked. The summary helps the team quickly understand the current quality of the system and identify any critical defects that need to be fixed before release.

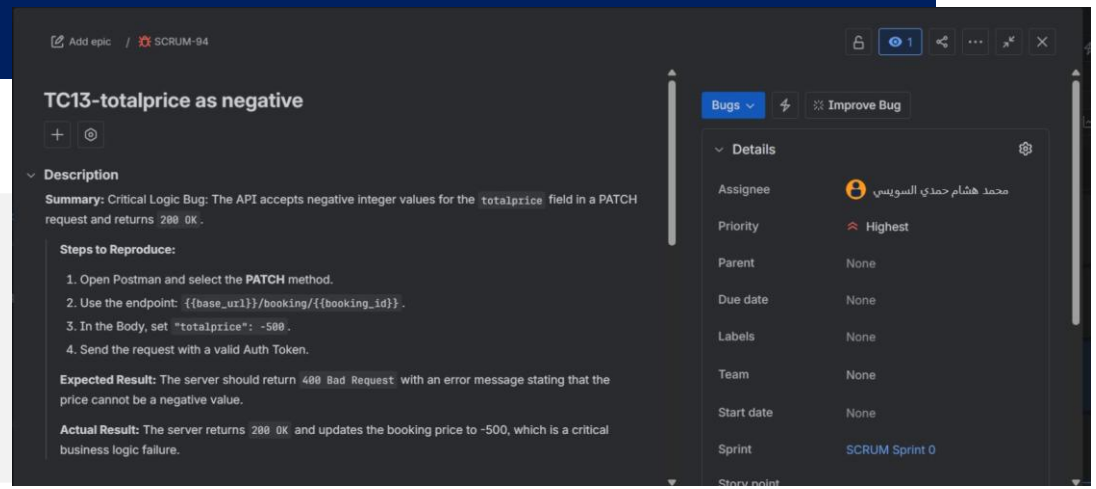




Bug Reporting (Defect Management)

Sample Test Cases :

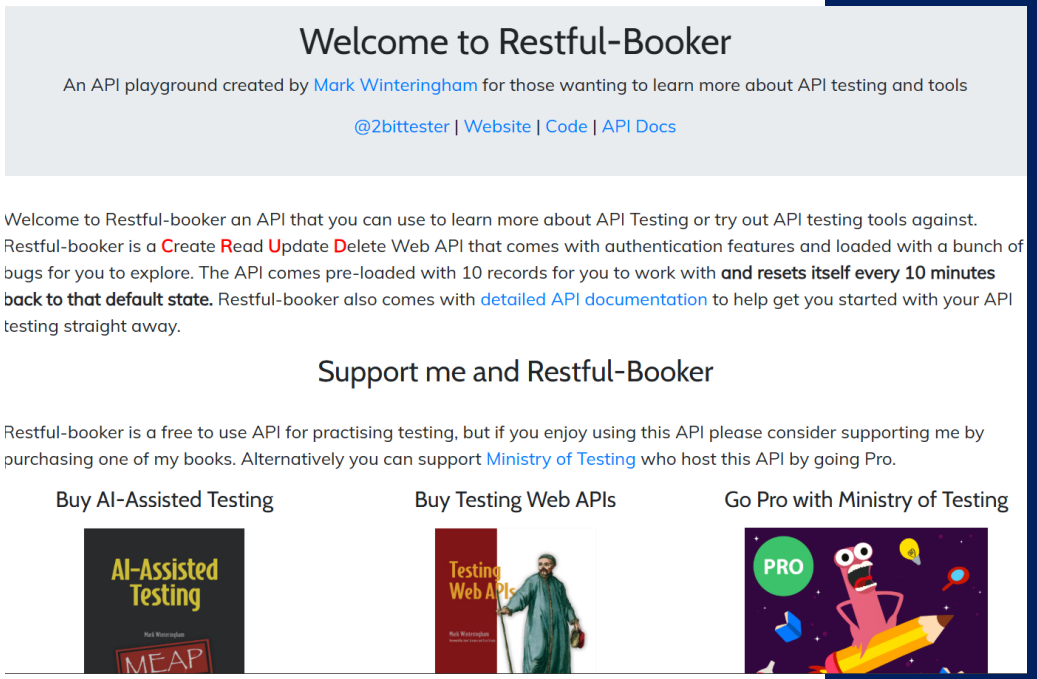
- Bugs are logged in Jira with full detailsEach defect includes:
- Steps to reproduce
- Expected vs Actual results
- Severity & Priority
- Screenshots and API responses are attached for clarity



Goal:

Ensure all critical and high-priority issues are identified and resolved efficiently

Conclusion



Summary of Testing Plan

The Restful-Booker API test plan ensures a structured and comprehensive testing approach covering all critical functionalities.

- Full coverage of API endpoints
- Validation of functionality and security
- Clear defect reporting process
- Organized execution using industry tools

Final Goal:

Deliver a stable, reliable, and well-tested API ready for real-world usage.

Thank You!
